Wild Canaries. These are natives of the Canary Islands and are also to be found in St. Helena. They were introduced into this country about the 16th century, and from these the many varieties of fancy Canaries have been bred, by careful selection in mating, to produce the points desired. It will be noticed that the colour of these is what is termed as green amongst Canary fanciers, and birds of this colour are still produced in all the various breeds.

(FOR ADDRESS ONLY.)
